

DURATEX® ZERO

Low-joint and shrinkage-compensated. It sets new standards for creative freedom in planning and execution.

Product flyer

DURATEX® ZERO

LOW-JOINT AND SHRINKAGE-COMPENSATED.

ZMZ-7

WALO DURATEX® ZERO was developed for more creative freedom in planning and execution. Shrinkage and keying are drastically reduced. Joints can be used by architects and planners as design elements.

When laid in a composite or floating installation, new possibilities for interior design are opened up. Reduction of shrinkage according to the requirements SW1 of DIN 18560-1. In combination with appropriate surface treatments, DURATEX® ZERO can also be used as a finished floor covering. Uncompromising quality and technical know-how are the hallmarks of WALO DURATEX® ZERO.

Characteristics

- Low jointing
- Shrinkage compensated
- Resistant to deformation
- High compressive strength
- Non-combustible
- Floating or in bond
- Layer thicknesses according to SIA

Area of application

- Underlayment floors
- hard concrete floors
- heated screeds
- prefabricated floorings
